

Green Belt Online Course Lean Six Sigma

LSS e-learning

ISO13053
compliant

Achieve the fundamental business skills with qualifications that will enable you to **lead business transformation** through this online course (e-Learning)!

GeneX partners

- Lean Six Sigma (LSS) is a business transformation and business improvement method widely used in Europe and the United States.
- LSS can be used in all industries including manufacturing, healthcare, logistics, finance, services, IT, etc.
- Incorporates a business process improvement method that uses an analytical method called DMAIC (*1).
- The improvement results are evaluated as cost savings, so the returns on investment becomes evident.
- Green Belt is the project leader of Lean Six Sigma.
- By using the DMADV method (*2, Design for Six Sigma), LSS can be applied to the design and reconstruction of new processes.

Lean Six Sigma Green Belt

*1: Define, Measure, Analyze, Improve, Control, Process improvement method
*2: Define, Measure, Analyze, Design, Verify, Process redesign method

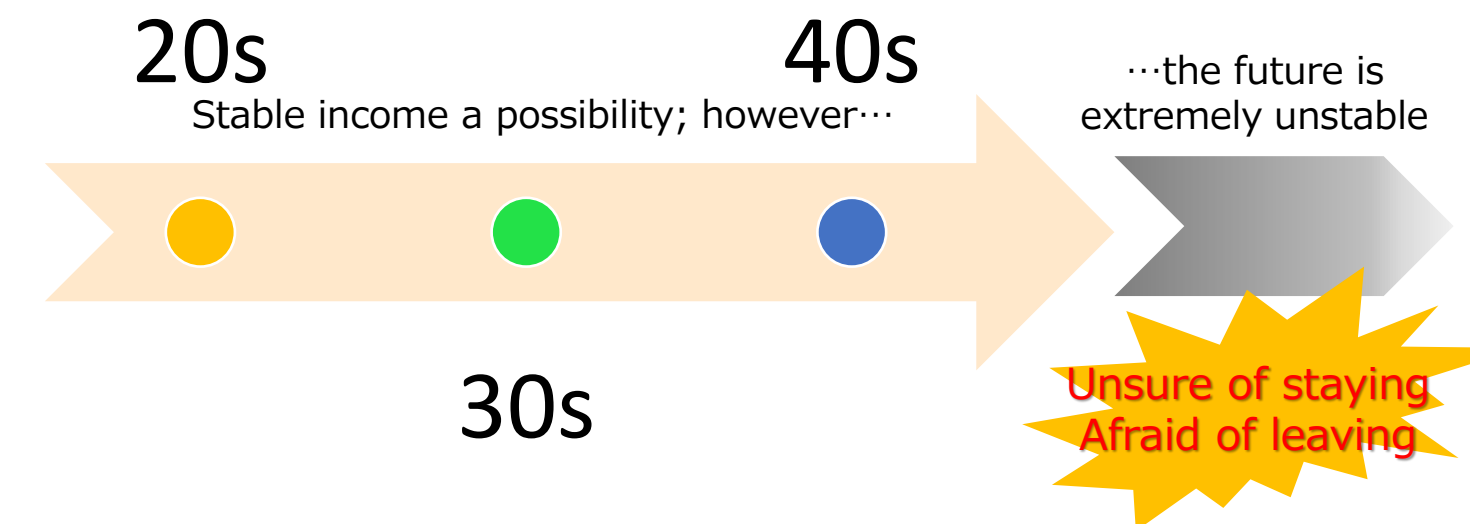

The 2020s bring a drastic change to our employment structure!

I'm worried about the future, but how do I get a career that would work anywhere?

- End of lifelong employment
- 45-year-old restructuring system
- Age 60 post retirement employment

Large companies are increasingly implementing "upfront investment restructuring" regardless of their operating results. This became noticeable in 2022, and the trend is expected to continue.

It is now critical to gain "skills that are universally applicable" to enhance individual value. It is a necessity to acquire the skills to ensure continued employment, or a successful transition to any business if in case of a job change.

Features of online course

Benefits for course participants

- ISO13053 compliant, a globally recognized certification earned upon graduation
